CURRICULUM TIMELINE

This curriculum is extremely thorough while allowing for flexibility. The instructor has the option to teach the entire curriculum and have the students complete all the activities, or the instructor can pick, choose, and/or skip any of the activities or quizzes. Instructors may also decide to include projects of their own. Below is a suggested timeline showing minimum and maximum days for each Unit.

(1 day = 60-minute class)

	Description	Minimum # days (if some activities are skipped)	Maximum # days (if all activities completed)
Unit 1: Safety Considerations	Stresses the importance of adopting a “safety attitude” when building and flying a drone. Covers workshop safety and outdoor flying.	3	5
Unit 2: Overview of Drones	Covers nomenclature, history of aerial drones, reputation, airframe, configurations, basic components, and current/future uses of drones.	3	5
Unit 3: Basics of Flight	Introduces aerodynamics, history of flight, Newton’s Laws of Motion, Bernoulli’s Principle, four forces of flight, three axes of flight, how they apply to drone flight. Reveals issues aircraft pilots encounter including airspace, traffic patterns, and safe altitudes.	5	7
Unit 4: Common Sense Flying	Discusses responsibility of flying and being “neighborly.” Discusses building or buying a drone.	3	5
Unit 5: Maintenance & LiPo Battery Care	Emphasizes importance of pre-flight checklists and logging flights. Stresses safety when using LiPo batteries including proper charging methods, discharging, handling, and disposal.	3	5
